

# Pure Copper HVOF 20-45 $\mu\text{m}$

## 1. Introduction

Pure Copper HVOF 20-45  $\mu\text{m}$  is a high-quality copper powder with spherical particles with no satellite content. Dedicated for HVOF (High Velocity Oxygen Fuel). It ensures consistent flowability and layer quality. Designed specifically for thermal applications, electrical and thermal conductivity coatings, mold and tooling applications as well as tribological surfaces.

### 1.1 Basic facts

|                    |                                                      |
|--------------------|------------------------------------------------------|
| Chemistry          | Cu 99.80%                                            |
| Form               | Powder                                               |
| Shape / Morphology | Spherical / Spheroidal                               |
| Size               | 20-45 $\mu\text{m}$                                  |
| Apparent density   | min. 4.6 g/cm <sup>3</sup>                           |
| Purpose            | Thermal conductivity coatings, tribological surfaces |
| Process            | HVOF                                                 |

### 1.2 Typical Applications

- Electrical and thermal conductivity coatings
- Restoration and repair of copper or copper-alloy parts
- Corrosion protection coatings
- Bond coats / interlayers
- Mold and tooling applications
- Tribological / sliding surfaces
- EMI/RFI shielding

## 2 Material Information

---

### 2.1 Chemical composition

| Element | Value | wt.%  |
|---------|-------|-------|
| Cu      | min.  | 99.80 |
| O       | max.  | 0.12  |
| Others  | max.  | 0.08  |

### 2.2 Additional Material Characteristics

| Product                     | Nominal range | Apparent density (g/cm <sup>3</sup> ) | Morphology             |
|-----------------------------|---------------|---------------------------------------|------------------------|
| Pure Copper HVOF<br>20-45µm | 20-45 µm      | Min. 4.6                              | Spherical / Spheroidal |

### 2.3 Recommended processes

- HVOF (High Velocity Oxygen Fuel)

## 3 Physical Properties of Parts

---

### 3.1 Mechanical Properties

| Product                     | Max Service Temperature °C |      | Recommended Finishing Method      |
|-----------------------------|----------------------------|------|-----------------------------------|
|                             | °C                         | F    |                                   |
| Pure Copper HVOF<br>20-45µm | 750                        | 1380 | High speed steel or carbide tools |

## 4 Commercial Information

---

### 4.1 Ordering Information and Availability

| Product                     | Package Size | Package Type       | Availability | Distribution |
|-----------------------------|--------------|--------------------|--------------|--------------|
| Pure Copper HVOF<br>20-45µm | 2kg          | Plastic Jar UNX    | Stock        | Europe       |
|                             | 4kg          | Plastic Jar UNX    | Stock        | Europe       |
|                             | 10kg         | Wide-neck drum UNX | Stock        | Europe       |

### 4.2 Storage and Handling Guidelines:

- Always store the product in its original container in a dry environment.
- Gently rotate the container before use to ensure even distribution. Avoid aggressive handling to prevent damage to fragile, mechanically clad components.
- Once opened, powder containers should be kept in a drying oven to prevent moisture absorption.
- If a desiccant is present, be sure to remove it prior to using the product.

### 4.3 Safety Recommendations

Refer to the Safety Data Sheet (SDS). SDS document can be accessed on the Ultra Metal Powders website at [www.umpowders.com](http://www.umpowders.com) under Resources → Safety Data Sheets.
